Sun, 17 Jun 2018 17:24:00 GMT - In fluid dynamics, turbulence or turbulent flow is any pattern of fluid motion characterized by chaotic changes in pressure and flow velocity. It is in contrast to a laminar flow regime, which occurs when a fluid flows in parallel layers, with no disruption between those layers.. Turbulence is commonly observed in everyday phenomena such as surf, fast flowing rivers, billowing storm clouds, or ...

Tue, 19 Jun 2018 12:13:00 GMT - Clear-air turbulence (CAT) is the turbulent movement of air masses in the absence of any visual clues, such as clouds, and is caused when bodies of air moving at widely different speeds meet.. The atmospheric region most susceptible to CAT is the high troposphere at altitudes of around 7,000â€“12,000 metres (23,000â€“39,000 ft) as it meets the tropopause.
